## The Global Challenge

Pre-empt or combat the first stages of the emergence of zoonotic diseases that pose a significant threat to public health, before they enter into humans.

**USAID**  
FROM THE AMERICAN PEOPLE

**PREDICT**

In order to predict the emergence of novel infectious diseases in humans, pathogens must be identified at their source.

Targeted, informed surveillance

→ Pathogen identification

→ Response and Prevention

**USAID**  
FROM THE AMERICAN PEOPLE

**PREDICT**

- **Majority of emerging infectious diseases (EIDs) in people are of animal origin (zoonotic)**

- **75% of emerging zoonoses have wildlife origins**

- **Examples: HIV, SARS, Avian Influenza, Nipah virus, Ebola**

# Importance of Early Detection

- Key to Control
- Reduction of Post-transfer Host Adaptation
  - Potentially Lower Transmissibility
- Allows Sequencing to Improve Quality & Speed of Diagnostics and Preventive care

**USAID**  
FROM THE AMERICAN PEOPLE

**PREDICT**

**USAID**  
FROM THE AMERICAN PEOPLE

**PREDICT**

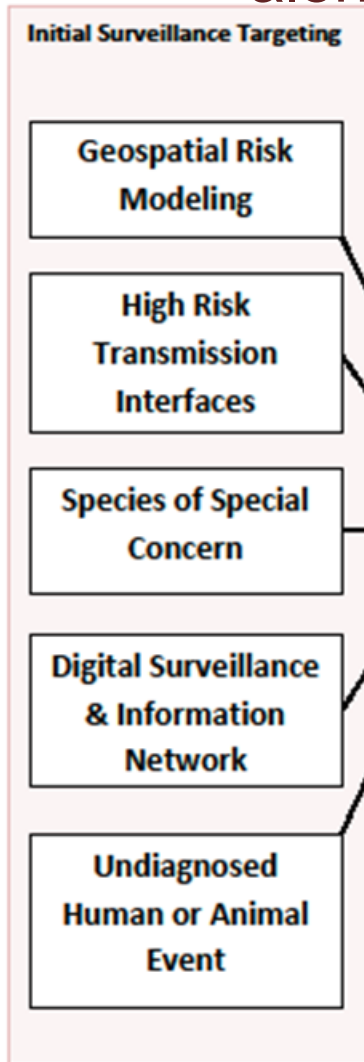

# Wild animal/ Human/ livestock/ interfaces: high risk areas for disease transmission between species

# Developing a Targeted Surveillance Strategy

along high risk disease transmission interfaces

- Hunting
- Markets/trade
- Wildlife/livestock conflict
- Wildlife farms
- Extraction
- Land use change
- Water availability
- Global transportation

**USAID**  
FROM THE AMERICAN PEOPLE

**PREDICT**

# Increasing interfaces, especially in developing countries

Increasing human and livestock population densities

Wild habitat reduction and land use changes

**USAID**  
FROM THE AMERICAN PEOPLE

**PREDICT**

## AIMS

- **Assess & Improve wildlife pathogen surveillance**
- **Increase value of infectious disease modeling**
- **Deliver new technologies**
- **Employ cutting-edge information management & public health communication tools**

# Building Wildlife Surveillance Capacity for Lao PDR

**USAID**  
FROM THE AMERICAN PEOPLE

**PREDICT**

**USAID**  
FROM THE AMERICAN PEOPLE

**PREDICT**

## Training Topics

- Overview of zoonotic diseases and surveillance methods
- Health and safety during sample collection
- Health and safety during wildlife sample analysis
- Identification of different wildlife species
- Ethical and safe handling and sampling methods for a wide range of wildlife species
- Appropriate cold storage and sample storage and shipment for specific zoonotic disease analysis
- Diagnostic methodologies
- Relevant wildlife data collection for risk analysis
- Novel Information management techniques

**USAID**  
FROM THE AMERICAN PEOPLE

**PREDICT**

# Key animal groups

- Bats
- Carnivores
- Rodents
- Primates
- Birds
- Ungulates

# Initial planned collaboration with NAHC

- **Bats:**

**Rabies** (Lyssavirus family)

Henipaviruses

Coronaviridae

- **Civets:** Coronaviridae (e.g. SARS CoV)

Lyssavirus

Expand to other species and pathogens

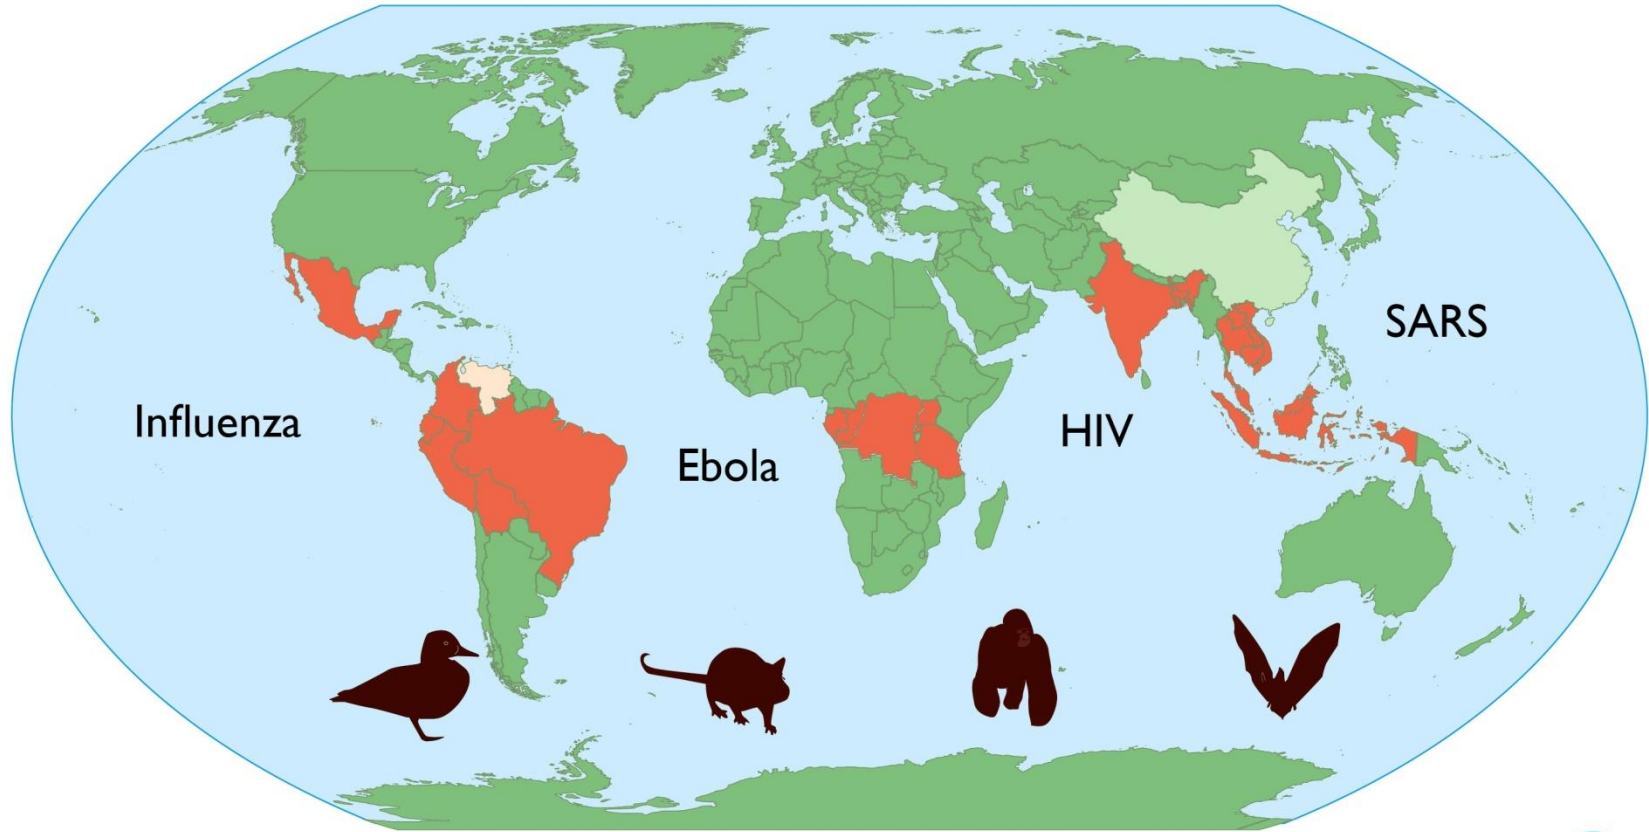

**USAID**  
FROM THE AMERICAN PEOPLE

**PREDICT**

# PREDICT: Building a global early warning system for emerging diseases that move between wildlife and people

# PREDICT

**USAID**  
FROM THE AMERICAN PEOPLE

**PREDICT**

- Identify high risk species, locations and activities
- Work with IDENTIFY to rule out common pathogens and identify key emerging pathogens
  - Communication through NEIDCO-
- Target locations for PREVENT to focus
- Work with RESPOND for surveillance and outbreak response training

# Developing a Targeted Surveillance Strategy

responsive to potential pathogen emergence

- Surveillance of sick or dead wild animals

- **Using mobile phone technology to rapidly detect symptomatic animals & evaluate spillover**

- Monitor for human & livestock outbreaks of zoonotic disease
  - **Sample wildlife in proximity to affected communities to determine source**

**USAID**
